## Project Update- Polio Plus

### Project Update: Polio Plus

poliovirus type 1 has been reported. There have been ELEVEN cases reported from Pakistan in 2022. In **Afghanistan**, one case has been reported this year.

In the midst of a devastating earthquake in Afghanistan in June, Polio teams supported the disaster response.

"The team's invaluable experience and local knowledge gained from more than two decades working among local communities in both Paktika and Khost provided the foundations of an assessment tool to map communities and assess the number and extent of casualties as well as the destruction to homes and buildings. This ensured accurate data guided a focused response in the immediate aftermath including the rapid construction of tents for shelter as well as housing ad hoc health camps." [Read More](#)

## Opportunity to volunteer at the Dream Center

By Paul E. Kulik on Sunday, August 7, 2022

If you have previously signed up to participate on Aug. 16th at the Dream Center, please indicate if you can provide any of the items for the meal:

- Canned corn-we have many donations from WARM-just need to heat;
- cookies or brownies,
- bottled water.

In addition, if you are able to serve and assist with clean-up, please email [<paulkulik695@gmail.com>](mailto:paulkulik695@gmail.com) or call 614-940-1905. Thank you and have a great week, Rotarians!

## Update on Polio in the USA

By Anne M VanBuskirk PhD on Sunday, August 14, 2022

I'm sure we have all heard about the case of paralytic polio in the USA, specifically in New York State (Rockland County). The unvaccinated person with polio in Rockland county, NY, has a strain of the virus that occurs when the attenuated(weakened) vaccine strain used in some other countries reverts back to an infectious virus. This reverted virus can then infect unvaccinated people. This is really rare, but can happen. The polio vaccine in the USA uses a killed virus, commonly called IPV (inactivated polio virus) so there is no opportunity for the virus to evolve back to an infective state.

There is an estimate that for every case of paralytic polio, there are at least 100 cases undetected, so local health authorities will monitor the waste of areas where polio is suspected. Polio virus has now been detected in Rockland and Orange counties, as well as New York City, indicating that the virus is circulating in the local, unvaccinated population. Earlier this year, infectious virus was also detected in the waste from London, UK. All of this means that polio is circulating and could still cause problems.

Who are the people most at risk of developing polio?

- Unvaccinated individuals
- Individuals who haven't received the full course of vaccination
- People traveling to high risk areas (CDC recommends that people traveling to Africa, Asia and Eastern Europe who previously completed the regular vaccine schedule get a single, lifetime booster shot)

As we know, there is no cure for polio, but it can be prevented with vaccination. As Rotarians, we are dedicated to eradicating polio- and now that also means we need to continue our advocacy for vaccination efforts- in the USA as well as the rest of the world. We cannot afford to be complacent. If you want to read more:
