Product Information

The first line of defense:

Bed bugs earned their name by being more commonly found hiding on or near the bed than anywhere else in infested homes. Bed bugs feed on human blood while their hosts are sleeping, then hide in a tight and secure place to rest, digest, and reproduce. If left unchecked, a small number of bed bugs with access to a nightly meal can multiply into an infestation in just a few weeks.

SafeRest mattress encasements and box spring encasements are essential to the process of making your bed bed bug proof. Bed bug encasements seal off the mattress and box spring, eliminating those common hiding places that bed bugs use to breed and to avoid treatment efforts.

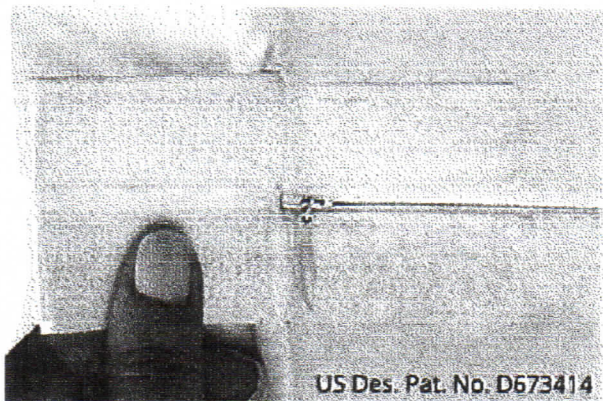

Rather than disposing of expensive mattress sets, SafeRest bed bug proof encasements can be used to seal off the any bed bugs inside and preventing them from escaping. Over time, these trapped bed bugs will die of starvation

When designing their encasements for bed bugs, dust mites, and fluid protection, SafeRest selected only the finest exclusive features. The result was a breathable, noiseless encasement that prevents bed bugs, bacteria, dust mite

This premium level of protection has helped thousands with allergies and asthma to improve their health by providing a sleep environment. SafeRest encasements have also helped others to protect and treat their mattresses against bed bugs from heavy night sweating or have children, pets, or incontinence have benefitted from SafeRest's breathable waterproof fluids from passing through.

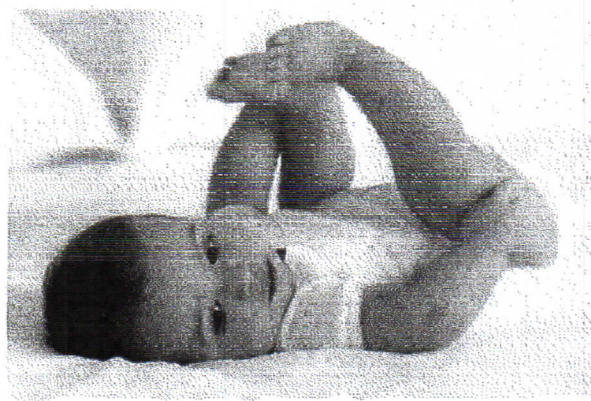

Premium Features:

US Des. Pat. No. D673414

360° Secure Micro Zipper

SafeRest's patented zipper and enclosure completely seal your mattress on all six sides.

Premium Cotton Terry Surface

While other encasements use low-cost materials that rustle and retain heat, SafeRest's designers went out of their way to

Waterproof

Protect your mattress from sweat and urine with a waterproof membrane layer.

✓ Bed Bug Supply Review - see what our experts have to say about this product

Of all the encasement brands we've reviewed SafeRest are by far the most advanced and highest quality on the market with full protection against bed bugs, fluids, dust mites and allergens. SafeRest was also tested with live bed bugs and are certified bed bug proof. Encasements are important as they seal off the mattress eliminating potential hiding places where bed bugs may reside. They also prevent bed bugs from escaping the encasement leading to their death by starvation. Another great feature offered by SafeRest is their high quality cotton terry surface material back coated with a breathable waterproof membrane layer, which does not sleep hot and makes no noise. Once installed, you can't even tell that the encasement has been applied.

SafeRest Bed Bug Mattress Encasement

SafeRest Encasements offer two features not available on any other encasement. These features include their patented Micro-Zipper, which prevents the end zipper traveler from pulling back by securing the zipper traveler with a Velcro flap and the advanced Micro-Zipper, which prevents even the smallest infant bed bugs from passing through. SafeRest encasements protect the integrity of the seams.

Mattresses today are not cheap and should be protected to ensure years of use. Just one fluid spill or experience with bed bugs is why premium encasements should be applied. Those with allergies or asthma will also benefit from the encasement preventing allergens from passing through resulting in improved air quality. Periodically wash the encasement to remove any dirt or allergens. SafeRest encasements are also vinyl and PVC free and offer a 10-year manufacture warranty.
