How Rotary Changed to Help People Get Clean Water Permanently

The lack of access to clean water, sanitation facilities, and hygiene resources is one of the world's biggest health problems and one of the hardest to solve.

Rotary has worked for decades to provide people with clean water by digging wells, laying pipes, providing filters, and installing sinks and toilets. But the biggest challenge has come after the hardware is installed. Too often, projects succeeded at first but eventually failed.

The Rotary Club of Nakuru, Kenya, the local host club, now provides materials and teaches families how to build their own 10,000-liter tanks. Each family is responsible for the labor and maintenance. With a \$50 investment, a family can collect enough water to get through the dry season.

To date, the project has funded the construction of more than 3,000 tanks, bringing clean water to about 28,000 people. Family members no longer have to walk several miles per day to collect water, a task that often fell to women and children.

As owners of the tanks, women are empowered to reimagine how their households work. And with the help of microloans they get through the Rotary clubs, mothers are running small businesses and generating income instead of fetching water.

◆With ownership comes liberation, not just for the mothers but for their children, who now have the time to attend school,◆ Denham explains.
