Speaker: Marla Schuchman- December 2 2022

By Jeffery Andrew Trimbur on Wednesday, November 30, 2022

RESEARCH AND TECHNOLOGY PARTNERSHIPS OFFICE MANAGER

[Bio Link](#)

Marla Schuchman has a knack for building connections. Now, she's putting that skill to work on behalf of Jefferson Lab and its many talented inventors and researchers. As the manager of the lab's new Research and Technology Partnerships Office, Schuchman will work with inventors and industry to ensure that smart ideas and intellectual

property generated in support of the lab's research mission receives the focus, guidance and outreach it needs to reach the marketplace, or open up new partnerships for Jefferson Lab.

Through her leadership in the office, Schuchman will serve as a dedicated, on-staff resource and advocate, helping connect inventors with industry leaders and end users who can build on their intellectual property. Inventors may include anyone who develops intellectual property in the course of their work, from scientists and engineers to staff administrators and computer programmers. The process of applying newly discovered technology to a product outside of the lab is referred to as "commercialization."

"If you want to learn whether a technology has practical market value, you have to get out there, talk to people, and generate ideas around potential use cases. Ideally, we do this at the very beginning of the commercialization process, often before people feel ready to talk about what they are working on," said Schuchman.

Real world applications of advances made by lab staff might include business-to-consumer products, such as a super lightweight tennis racquet made with a groundbreaking nanotube technology. They may include healthcare applications, such as medical devices to diagnose or treat breast cancer. Or they may have industrial applications, such as cryogenic technologies to increase the efficiency and stability of high-power refrigeration units.
